Evidence-Based Interventional Pain Medicine Jun 24 2020 Unrelieved chronic pain is a worldwide epidemic Chronic pain has been subject to multiple international initiatives through the World Health Organization. Interventional Pain Medicine, the use of minimally invasive techniques to relieve pain, is the best

approach when simpler measures such as physical therapy or medications fail. However, these procedures can be associated with significant risk and expense. Establishing uniformity in diagnostic criteria and procedural performance can reduce both morbidity and unnecessary procedures, and hence healthcare expenditures. While other texts explain how to perform these procedures, little focus has been given to diagnostic considerations: if and when these procedures should be performed. Evidence-Based Interventional Pain Medicine focuses on a balance between effectiveness and safety of interventional management for specific diagnoses, across all areas of chronic pain including: Head, neck and shoulder pain Lower back pain Neuropathic pain syndromes Complex Regional Pain Syndrome Pain in patients with cancer Vascular and visceral pain Evidence-Based Interventional Pain Medicine provides essential knowledge for anyone who uses, or intends to use, interventional pain techniques.

Textbook of Hernia Jul 26 2020 This textbook provides a comprehensive, state-of-the-art review of the field of hernia surgery, and will serve as a valuable resource for clinicians, surgeons and researchers with an interest in both inguinal and ventral/incisional hernia. This book provides an overview of the current understanding of the biologic basis of hernia formation as well as laying the foundation for the importance of hernia research and evaluating outcomes in hernia repair. From Revolt to Riches Jul 18 2022 This collection investigates the culture and history of the Low Countries in the sixteenth and seventeenth centuries from both international and interdisciplinary perspectives. The period was one of extraordinary upheaval and change, as the combined impact of Renaissance, Reformation and Revolt resulted in the radically new conditions – political, economic and intellectual – of the Dutch Republic in its Golden Age. While many aspects of this rich and nuanced era have been studied before, the emphasis of this volume is on a series of interactions and interrelations: between communities and their varying but often cognate languages; between different but overlapping spheres of human activity; between culture and history. The chapters are written by historians, linguists, bibliographers, art historians and literary scholars based in the Netherlands, Belgium, Great Britain and the United States. In continually crossing

disciplinary, linguistic and national boundaries, while keeping the culture and history of the Low Countries in the Renaissance and Golden Age in focus, this book opens up new and often surprising perspectives on a region all the more intriguing for the very complexity of its entanglements.
