Inside Radio: An Attack and Defense Guide Mar 21 2020 This book

discusses the security issues in a wide range of wireless devices and systems, such as RFID, Bluetooth, ZigBee, GSM, LTE, and GPS. It collects the findings of recent research by the UnicornTeam at 360 Technology, and reviews the state-of-the-art literature on wireless security. The book also offers detailed case studies and theoretical treatments - specifically it lists numerous laboratory procedures, results, plots, commands and screenshots from real-world experiments. It is a valuable reference guide for practitioners and researchers who want to learn more about the advanced research findings and use the off-the-shelf tools to explore the wireless world.

PC Mag Apr 02 2021 PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.

Algorithm Design: A Methodological Approach - 150 problems and detailed solutions Aug 18 2022 A bestseller in its French edition, this book is original in its construction and its success in the French market demonstrates its appeal. It is based on three principles: (1) An organization of the chapters by families of algorithms: exhaustive search, divide and conquer, etc. On the contrary, there is no chapter devoted only to a systematic exposure of, say, algorithms on strings. Some of these will be found in different chapters. (2) For each family of algorithms, an introduction is given to the mathematical principles and the issues of a rigorous design, with one or two pedagogical examples. (3) For the most part, the book details 150 problems, spanning seven families of algorithms. For each problem, a precise and progressive statement is given. More importantly, a complete solution is detailed, with respect to the design principles that have been presented; often, some classical errors are pointed out. Roughly speaking, two-thirds of the book is devoted to the detailed rational construction of the solutions.

Computer Literature Bibliography: 1964-1967 Oct 16 2019

The Green Book Oct 28 2020 This new edition incorporates revised guidance from H.M Treasury which is designed to promote efficient policy development and resource allocation across government through the use of a thorough, long-term and analytically robust approach to the appraisal and evaluation of public service projects before significant funds are committed. It is the first edition to have been aided by a consultation process in order to ensure the guidance is clearer and more closely tailored to suit the needs of users.

Design and Development of Web Information Systems Aug 06 2021 This book describes the research of the authors over more than a decade on an end-to-end methodology for the design and development of Web Information Systems (WIS). It covers syntactics, semantics and pragmatics of WIS, introduces sophisticated concepts for conceptual modelling, provides integrated foundations for all these concepts and integrates them into the co-design method for systematic WIS development. WIS, i.e. data-intensive information systems that are realized in a way that arbitrary users can access them via web browsers, constitute a prominent class of information systems, for which acceptance by its a priori unknown users in varying contexts with respect to the presented content, the ease of functionality provided and the attraction of the layout adds novel challenges for modelling, design and development. This book is structured into four parts. Part I, Web Information Systems - General Aspects, gives a general introduction to WIS describing the challenges for their development, and provides a characterization by six decisive aspects: intention, usage, content, functionality, context and presentation. Part II, High-Level WIS Design - Strategic Analysis and Usage Modelling with

Storyboarding, introduces methods for high-level design of WIS covering strategic aspects and the storyboarding method, which is discussed from syntactic, semantic and pragmatic perspectives. Part III, Conceptual WIS Design - Rigorous Modelling of Web Information Systems and their Layout with Web Interaction Types and Screenography, continues with conceptual design of WIS including layout and playout. This introduces the decisive web interaction types, the screenography method and adaptation aspects. The final Part IV, Rationale of the Co-Design Methodology and Systematic Development of Web Information Systems, describes the co-design method for WIS development and its application for the systematic engineering of systems. The book addresses the research community, and at the same time can be used for education of graduate students and as methodological support for professional WIS developers. For the WIS research community it provides methods for WIS modelling on all levels of abstraction including theoretical foundations and inference mechanisms as well as a sophisticated end-to-end methodology for systematic WIS engineering from requirements elicitation over conceptual modelling to aspects of implementation, layout and playout. For students and professional developers the book can be used as a whole for educational courses on WIS design and development, as well as for more specific courses on conceptual modelling of WIS, WIS foundations and reasoning, co-design and WIS engineering or WIS layout and playout development.

Tolerance Analysis of Electronic Circuits Using MATHCAD Jun 04 2021
Written for the practicing electronics professional, Tolerance Analysis of Electronic Circuits Using MATHCAD offers a comprehensive, step-by-step treatment of methods used to perform analyses essential to the design process of circuit cards and systems of cards, including: worst-case analysis, limits for production testing, component stress analysis, determining if a design meets specification limits, and manufacturing yield analysis Using a practical approach that allows engineers and technicians to put the techniques directly into practice, the author presents the mathematical procedures used to determine performance limits. The topics and techniques discussed include extreme value and root-sum-square analysis using symmetric and asymmetric tolerance, Monte Carlo analysis using normal and uniform distributions, sensitivity formulas, tolerance analyses of opamp offsets, and anomalies of high-Q ac circuits.

Preparing for Educational Administration Using Case Analysis Sep 07 2021
This very readable book combines 34 meaningful case studies and a case analysis framework to create a powerful resource and useful reference for educational administration and leadership topics. It offers a unique

opportunity to participate in serious problem solving with relevant and realistic case material that captures the interest of the reader. By introducing real life situations and a case analysis framework, readers are able to analyze and resolve the problems presented in each case.

Traditional topics such as curriculum/instruction, leadership, employee/community relations, finances, technology, and special education are covered. It effectively deals with sensitive subjects--including race and gender relations, health and welfare, conflict management, ethics, and diversity--so that learners understand the real-world nuances of handling potentially volatile situations. For educators with a lifelong learning habit regarding their professional knowledge.

Web Information Systems and Technologies Nov 09 2021 This book contains the best papers from the International Conference on Web Information Systems and Technologies (WEBIST 2007), organized by the Institute for Systems and Technologies of Information, Control and Communication (INSTICC), endorsed by IW3C2, and held in Barcelona, Spain. The purpose of WEBIST is to bring together researchers, engineers, and practitioners interested in the technological advances and business applications of web-based information systems. It has four main topic areas, covering different aspects of web information systems, namely, internet technology; web interfaces and applications; society, e-business and e-government; and e-learning. WEBIST 2007 received 367 submissions from more than 50 countries across all continents. After a double-blind review process, with the help of more than 200 - perts from the international program committee, and also after presentation at the conference, 23 papers were finally selected. Their extended and revised versions are published in this book. This strict selection made the conference appealing to a global audience of engineers, scientists, business practitioners, and policy experts. The - pers accepted and presented at the conference demonstrated a number of new and innovative solutions for e-business and web information systems in general, showing that the technical problems in this field are challenging and worth further R&D effort. The program of this conference also included three outstanding keynote lectures presented by internationally renowned distinguished researchers. Their keynote speeches reinforced the overall quality of the event.

Computer Literature Bibliography: 1946-1963 Sep 19 2022

Mathematics in Games, Sports, and Gambling Feb 12 2022 With an emphasis on mathematical thinking and problem solving, *Mathematics in Games, Sports, and Gambling — The Games People Play* shows how discrete probability, statistics, and elementary discrete mathematics are used in games, sports, and gambling situations. It draws on numerous examples, questions, and problems to explain the application of mathematical theory to various real-life games. Only requiring high school algebra, the text offers flexibility in choosing what material to cover in a basic mathematics course. It covers permutations in the two-deck matching game so derangements can be counted, introduces graphs to find matches when looking at extensions of the five-card trick, and studies lexicographic orderings and ideas of encoding for card tricks. The text also explores linear equations and weighted equations in the section on the NFL passer rating formula and presents graphing to show how data can be compared or displayed. For each topic, the author includes exercises based on real games and sports data.

Case-Based Reasoning Research and Development Apr 14 2022 This book constitutes the refereed proceedings of the 25th International Conference on Case-Based Reasoning Research and Development, ICCBR 2017, held in Trondheim, Norway, in June 2017. The 27 full papers presented together with 3 keynote presentations were carefully reviewed and selected from 38 submissions. The theme of ICCBR-2017, "Analogy for Reuse", was highlighted in several events. These papers, which are included in the proceedings, address many themes related to the theory and application of case-based reasoning, analogical reasoning, CBR and Deep Learning, CBR in the Health Sciences, Computational Analogy, and Process-Oriented CBR.

Trust, Privacy and Security in Digital Business Sep 26 2020 This volume features the refereed proceedings of the 4th International Conference on Trust and Privacy in Digital Business. The 28 papers were all carefully reviewed. They cover privacy and identity management, security and risk management, security requirements and development, privacy enhancing technologies and privacy management, access control models, trust and reputation, security protocols, and security and privacy in mobile environments.

The CRC Card Book Dec 22 2022 This concise book addresses the actual details involved with using CRC cards, including coverage of the team approach to analysis and examples of program code (Java, C++, and Smalltalk) derived from the use of the CRC card method.

*Trading Card Games For Dummies Jan 23 2023 Check out Magic: The Gathering, HeroClix, and more Explore popular games like Legend of the Five Rings, build decks, and trade online Whether you're already hooked on trading card games, want to understand what your kids are into, or are just curious to see what all the fuss is about, you've come to the right place. Here's the scoop on the hottest games, secrets of successful collecting, tips for customizing your dream deck, and ways to make your hobby pay. Discover how to * Get started with the VS System, Yu-Gi-Oh, Pokemon, and others * Identify basic types of cards * Buy and sell online -- wisely * Play around with collectible miniatures * Safely store and transport your collection*

Telling Ain't Training, 2nd edition May 15 2022 For training that is as fun as it is effective, this is a must-have resource for anyone involved in training. Detailing the "who," "what," "when," "why" and "how" of learning, Telling Ain't Training provides everything you need to energise and engage leaders regardless of age experience. Fast-paced, fun and interactive, Telling Ain't Training incorporates principles of adult learning to separate learning myth from learning fact. Understand how people learn, what makes training successful, why training fails and how to achieve amazing training results.

ECAI 2020 Jan 11 2022 This book presents the proceedings of the 24th European Conference on Artificial Intelligence (ECAI 2020), held in Santiago de Compostela, Spain, from 29 August to 8 September 2020. The conference was postponed from June, and much of it conducted online due to the COVID-19 restrictions. The conference is one of the principal occasions for researchers and practitioners of AI to meet and discuss the latest trends and challenges in all fields of AI and to demonstrate innovative applications and uses of advanced AI technology. The book also includes the proceedings of the 10th Conference on Prestigious Applications of Artificial Intelligence (PAIS 2020) held at the same time. A record number of more than 1,700 submissions was received for ECAI 2020, of which 1,443 were reviewed. Of these, 361 full-papers and 36 highlight papers were accepted (an acceptance rate of 25% for full-papers and 45% for highlight papers). The book is divided into three sections: ECAI full papers; ECAI highlight papers; and PAIS papers. The topics of these papers cover all aspects of AI, including Agent-based and Multi-agent Systems; Computational Intelligence; Constraints and Satisfiability; Games and Virtual Environments; Heuristic Search; Human Aspects in AI; Information Retrieval and Filtering; Knowledge Representation and Reasoning; Machine Learning; Multidisciplinary Topics and Applications; Natural Language Processing; Planning and Scheduling; Robotics; Safe, Explainable, and Trustworthy AI; Semantic Technologies; Uncertainty in AI; and Vision. The

book will be of interest to all those whose work involves the use of AI technology.
