Underlays for Discontinuous Roofing and Walls. Determination of Resistance to Water Penetration Annual Book of ASTM Standards 2013

This Certificate relates to Skellerup Butylclad, Epiclad and Epiclad FBS Roof Membrane Systems, which consist of single-ply rubber sheets applied over a continuous substrate. Butylclad membranes are manufactured by Skellerup Industries Limited. Epiclad and Epiclad FBS membranes are manufactured by Carlisle SynTec Systems, Carlisle, Pennsylvania, USA. The products have been appraised for use as single-layer waterproof membrane systems for use on roofs and decks that do not provide access to buildings, and parapets when fully-bonded to a continuous substrate of either concrete or fibre reinforced cement-based and plywood sheets. The product must be used, installed and maintained in accordance with the manufacturer's technical information entitled 'Skellerup Roofing and Waterproofing Manual', dated 2000. Unless otherwise stated, reference to the manufacturer's technical information shall be taken as this document. For decades, this manual has been the most widely respected guide to designing, constructing, and maintaining low-slope roofing systems. Articles written by the pros will

help the worker to properly flash walls and roofs, avoid all common flashing errors, prevent ice dams, shingle a roof valley, lay out three-tab shingles, install a rubber roof and install steel roofing. This publication on common roofing and waterproofing materials and equipment is one of a series of units of instruction for roofing apprenticeship classes. The workbook portion is divided into eight topics: production of bitumens and asphalt roofing materials, built-up materials and adhesives, asphalt products and rigid roofing materials, single-ply roofing and waterproofing systems, flashing materials, fasteners, handling of roofing materials, and operation and maintenance of small engines. Objectives and informational material are provided for each topic. Appendixes to this section are a list of instructional materials required for each apprentice, glossary, and General Industry Safety Orders on industrial truck operation. The test section of this publication contains objective tests for each topic of the workbook. (YLB) Flexible materials, Sheet materials, Waterproofing materials, Waterproof materials, Sealing materials, Weather protection systems, Underlays, Roof underlays, Roofs, Construction systems parts, Walls, Discontinuous, Penetration tests, Physical testing, Water This book is one of a series of 10 units of instruction for roofing apprenticeship classes in California. It covers the following 14 topics and provides tests for them: the nature of the roofing and waterproofing industry; the apprenticeship program; apprenticeship and the public schools; collective bargaining, wages, and benefits; safety in the industry; types, styles, and structural designs of roofs; hand tools and power tools; equipment; introduction to kettles; lighting and loading of kettles; kettle heating; kettle cleaning and maintenance; roof pumps; and tankers. Each topic section consists of objectives, information sheets, and study assignments. Materials are illustrated with black and white pictures and line drawings. A glossary of roofing and waterproofing terms is included. Ten-item multiple choice tests are provided for each topic. (KC) These standards establish property requirements for roofing and waterproofing materials such as: asphalt roof coatings, single-ply membranes, underlayments, roll, and sheeting. Others detail EPDM roofing seams and analysis of roofing membrane materials. Accompanying the specifications are tests and practices, which fix standard procedures for measuring the properties of roofing and waterproofing materials. Also included are several specifications and tests for bitumenized fiber pipe.
