

Get Free Marine And Coastal Protected Areas 3rd Edition A Guide For Planners And Managers Pdf For Free

Marine Protected Areas Marine Protected Areas and Ocean Conservation Marine Protected Areas Marine and Coastal Protected Areas Governing Marine Protected Areas Marine and Coastal Protected Areas Marine Protected Areas Marine Protected Areas in International Law Marine Transboundary Conservation and Protected Areas Management of Marine Protected Areas Marine and Coastal Protected Areas in the UK Guidelines for Establishing Marine Protected Areas Marine Protected Areas Economics, Management and Effective Policy Mixes Guidelines for Marine Protected Areas Marine Protected Areas Marine Protected Areas Coastal and Marine Protected Areas in the Baltic Sea Region The International Legal Regime Relating to Marine Protected Areas in Areas beyond National Jurisdiction Marine Protected Areas A Bibliographical Listing of Coastal and Marine Protected Areas Marine Protected Areas for Whales, Dolphins, and Porpoises A Bibliographic Listing of Coastal and Marine Protected Areas Marine Protected Areas Network in the South China Sea Big, Bold and Blue HC 221 - Marine Protected Areas Improving The World Network Of Coastal And Marine Protected Areas Towards a Strategy for High Seas Marine Protected Areas Marine Protected Areas in Southeast Asia Marine Protected Areas A Framework for Future Training in Marine and Coastal Protected Area Management A Global Representative System of Marine Protected Areas: Antarctic, Arctic, Mediterranean, Northwest Atlantic, Northeast Atlantic, and Baltic Directory of Marine and Coastal Protected Areas in the Mediterranean Region A Global Representative System of Marine Protected Areas MPA News The Controversy over Marine Protected Areas Managing Coastal and Marine Protected Areas Annotated Bibliography on Socio-economic and Ecological Impacts of Marine Protected Areas in Pacific Island Countries A Global Representative System of Marine Protected Areas: Wider Caribbean, West Africa, and South Atlantic Marine Protected Areas and Biosphere Reserves Guidelines for applying the IUCN protected area management categories to marine protected areas

Creating protected areas; The roles of protected areas in conserving coastal and marine resources; Legislative and institutional support; Planning a system of protected areas; The protected area: site planning and management; Protected areas in different environments; Protected areas for coral reefs; Protected areas for lagoons and estuaries; Protected areas in the open sea; Protected areas for polar seas; Protected areas for small islands; Tools and case studies; Manager's guide; Classifying coastal and marine habitats for conservation; Criteria for identifying and selecting coastal and marine protected areas; Categories of marine and coastal protected areas; Case studies in zoning uses; Core and buffer zone designs; A case study in site design: the pulau seribu marine national park; Measuring economic benefits; The role of estuaries in fisheries production; Estuary case studies; Polar seas case study: walrus in the pacific arctic. Marine protected areas in SE Asia were assessed and reviewed to analyze the increasing threats such as coastal development, collecting of endangered species, ornamental trading, over-exploitation, pollution, and tourism that lead to the depletion of the biodiversity resources of the marine protected areas in the region. This is a new edition of the classic textbook on marine protected area (MPA) management in the tropics, originally produced as an output of the Bali World Parks Congress in 1982. Approaches to planning and managing MPAs have evolved considerably. Major advances include innovative financing mechanisms, partnerships with the private sector and NGOs, and collaborative management between government and coastal communities. These advances have brought new approaches for MPA establishment and management that are more participatory, involving communities through interaction and collaboration rather than prescription. With new case studies and illustrations, the guide comes in a water-resistant cover for field use. It is intended for those who plan individual and/or national MPA systems and gives philosophical context for MPAs along with some basic principles and approaches. The marine environment does not naturally respect arbitrary

international boundaries. The establishment and management of transboundary marine protected areas therefore presents major governance challenges. This book analyses a series of marine transboundary conservation initiatives embedded in varying contextual situations to examine the underlying reasons for their success or failure. Utilising an adapted 'pathways of influence' framework, it provides insights into the development of marine transboundary conservation initiatives looking at the effectiveness of international rules, international norms and discourse, market forces and direct access to policy making. Examples come from a wide range of jurisdictions, including territorial seas, continental shelves, exclusive economic zones and areas beyond national jurisdiction. Case studies include initiatives in the Coral Triangle, West Africa, Central America, the Wadden Sea, the Red Sea and the Mediterranean Sea. In addition the authors assess the potential for developing wider international cooperation as a result of relationships forged through involvement within these marine transboundary conservation initiatives. In this innovative volume, the author addresses some important challenges related to the effective and equitable governance of marine protected areas (MPAs). These challenges are explored through a study of 20 MPA case studies from around the world. A novel governance analysis framework is employed to address some key questions: How can top-down and bottom-up approaches to MPA governance be combined? What does this mean, in reality, in different contexts? How can we develop and implement governance approaches that are both effective in achieving conservation objectives and equitable in fairly sharing associated costs and benefits? The author explores the many issues that these questions raise, as well as exploring options for addressing them. A key theme is that MPA governance needs to combine people, state and market approaches, rather than being based on one approach and its related ideals. Building on a critique of the governance analysis framework developed for common-pool resources, the author puts forward a more holistic and less prescriptive framework for deconstructing and analyzing the governance of MPAs. This inter-disciplinary analysis is aimed at supporting the development of MPA governance approaches that build social-ecological resilience through both institutional and biological diversity. It will also make a significant contribution to wider debates on natural resource governance, as it poses some critical questions for contemporary approaches to related research and offers an alternative theoretical and empirical approach. Marine protected areas (MPAs) have an important role in marine conservation programmes around the world. Although most have been established relatively recently when compared with protected areas on land, there is considerable expertise on their identification, setting up and management. Some techniques have been adapted from those used on land. Others are novel, and unique to marine conservation. The chapters in this book give an insight into this fast developing field where experiment and innovation work alongside techniques which have been tried and tested. The guiding principles behind key stages in the setting up and management of MPAs are described, and case studies illustrate how they have worked. While it is most encouraging to read about the successes, the case studies also point to difficulties which have been encountered. Not all of the examples are new or recent but, together, they illustrate what is happening in this field. The aim [of this workshop] was to develop an action plan to promote a system of ... areas to ensure long-term protection of ecosystem processes, biological diversity and productivity beyond national jurisdiction. Marine Protected Areas: Science, Policy and Management addresses a full spectrum of issues relating to Marine Protected Areas (MPAs) not currently available in any other single volume. Chapters are contributed by a wide range of working specialists who examine conceptions and definitions of MPAs, progress on the implementation of worldwide MPAs, policy and legal variations across MPAs, the general importance of coastal communities in implementation, and the future of MPAs. The book constructively elucidates conflicts, issues, approaches and solutions in a way that creates a balanced consideration of the nature of effective policy and management. Those in theory, designation, implementation or management of MPAs, from individuals, marine sector organizations, and university and research center libraries will find it an important work. Provides a much needed 'one stop shop' for information on Marine Protected Areas Presents chapters from a diverse group of contributors, enabling a broad and deep perspective Includes case studies throughout, providing real-life examples and best practice recommendations

Marine Protected Areas in International Law – an Arctic perspective by Ingvild Ulrikke Jakobsen, examines the legal rights and obligations of states under international law using Marine Protected Areas to protect marine biodiversity, with a particular emphasis on the Arctic region. The bibliography is to highlight impacts on fisheries and livelihoods attributed to coral reef marine protected areas in Pacific Island countries and territories. Included in this collection is literature that reports various forms of reef area management practiced in Pacific Island countries: reserves, sanctuaries, permanent or temporary closed areas, community and traditional managed areas. Based on the identification of the 'participatory', 'competence' and 'geographical' gaps in the international legal regime relating to marine protected areas (MPAs) in areas beyond national jurisdiction (ABNJ), The International Legal Regime Relating to Marine Protected Areas in Areas beyond National Jurisdiction provides insight into how to address the gaps. Marine Protected Areas: Science, Policy and Management addresses a full spectrum of issues relating to Marine Protected Areas (MPS) not currently available in any other single volume. Chapters are contributed by a wide range of working specialists who examine conceptions and definitions of MPAs, progress on the implementation of worldwide MPAs, policy and legal variations across MPAs, the general importance of coastal communities in implementation, and the future of MPAs. The book constructively elucidates conflicts, issues, approaches and solutions in a way that creates a balanced consideration of the nature of effective policy and management. Those in theory, designation, implementation or management of MPAs, from individuals, marine sector organizations, and university and research center libraries will find it an important work. Provides a much needed 'one stop shop' for information on Marine Protected Areas Presents chapters from a diverse group of contributors, enabling a broad and deep perspective Includes case studies throughout, providing real-life examples and best practice recommendations The world's oceans cover about 70% of our planet. To safeguard the delicate ecological and environmental functions of the oceans and their remarkable biodiversity, networks of marine protected areas are being created. In some of these areas, human activity is restricted to non-exploitative activities and in others it is managed in a sustainable way. Australia is at the forefront of marine conservation, with one of the largest systems of marine protected areas in the world. Big, Bold and Blue: Lessons from Australia's Marine Protected Areas captures Australia's experience, sharing important lessons from the Great Barrier Reef and many other extraordinary marine protected areas. It presents real-world examples, leading academic research, perspectives on government policy, and information from indigenous sea country management, non-governmental organisations, and commercial and recreational fishing sectors. The lessons learnt during the rapid expansion of Australia's marine protected areas, both positive and negative, will aid and advise other nations in their own marine conservation efforts. Although the ocean-and the resources within-seem limitless, there is clear evidence that human impacts such as overfishing, habitat destruction, and pollution disrupt marine ecosystems and threaten the long-term productivity of the seas. Declining yields in many fisheries and decay of treasured marine habitats, such as coral reefs, has heightened interest in establishing a comprehensive system of marine protected areas (MPAs)-areas designated for special protection to enhance the management of marine resources. Therefore, there is an urgent need to evaluate how MPAs can be employed in the United States and internationally as tools to support specific conservation needs of marine and coastal waters. Marine Protected Areas compares conventional management of marine resources with proposals to augment these management strategies with a system of protected areas. The volume argues that implementation of MPAs should be incremental and adaptive, through the design of areas not only to conserve resources, but also to help us learn how to manage marine species more effectively. The world urgently needs a comprehensive system of Marine Protected Areas (MPAs) to conserve biodiversity and to help rebuild the productivity of the oceans. The aim of these Guidelines is to help countries establish systems of MPAs as a key component of integrated management of coastal and marine areas and as part of their sustainable development. The various actions to make an effective MPA are set out, from early planning stages to implementation. Human-induced environmental disturbance – through fishery activities, coastal development, tourism and pollution – is a major

challenge to the restoration and conservation of marine biodiversity. Synthesizing the latest research into marine biodiversity conservation and fisheries management, this book provides regional and global perspectives on the role of Marine Protected Areas (MPAs) in confronting this challenge. The approach is multidisciplinary, covering all the fields involved in designating and assessing MPAs: ecology, fisheries science, statistics, economics, sociology and genetics. The book is structured around key topics, including threats to marine ecosystems and resources, the effects and effectiveness of MPAs and the scaling-up of MPA systems. Both theoretical and empirical approaches are considered. Recognizing the diversity of MPA sciences, the book also includes one part designed specifically as a practical guide to implementing scientific assessment studies of MPAs and monitoring programs. This book is a critical analysis of the concept of marine protected areas (MPAs) particularly as a tool for marine resource management. It explains the reasons for the extraordinary rise of MPAs to the top of the political agenda for marine policy, and evaluates the scientific credentials for the unprecedented popularity of this management option. The book reveals the role played by two policy networks – epistemic community and advocacy coalition – in promoting the notion of MPA, showing how advocacy for marine reserves by some scientists based on limited evidence of fisheries benefits has led to a blurring of the boundary between science and politics. Second, the study investigates whether the scientific consensus on MPAs has resulted in a publication bias, whereby pro-MPA articles are given preferential treatment by peer-reviewed academic journals, though it found only limited evidence of such a bias. Third, the project conducts a systematic review of the literature to determine the ecological effects of MPAs, and reaches the conclusion that there is little proof of a positive impact on finfish populations in temperate waters. Fourth, the study uses discourse analysis to trace the effects of a public campaigning policy network on marine conservation zones (MCZs) in England, which demonstrated that there was considerable confusion over the objectives that MCZs were being designated to achieve. The book's conclusion is that the MPA issue shows the power of ideas in marine governance, but offers a caution that scientists who cross the line between science and politics risk exaggerating the benefits of MPAs by glossing over uncertainties in the data, which may antagonise the fishing industry, delay resolution of the MPA issue, and weaken public faith in marine science if and when the benefits of MCZs are subsequently seen to be limited. Marine Conservation Zones can protect our seas from over-fishing and give species and habitats space to recover, ultimately benefiting people whose livelihoods depend on healthy seas. But the Government has been too slow in creating these Zones, and it has failed to get coastal communities and fishermen on board. It is now well over four years since the launch of the programme, yet only 27 of the 127 sites recommended by independent project groups have been designated. Budget reductions at DEFRA mean the Government is currently unable to demonstrate that the Marine Management Organisation - the public body charged with managing the zones - will have the resources needed to manage and enforce the MCZs. The Government must set out a strategy for the management of the 27 MCZs and management plans for individual Zones to demonstrate that they can be enforced. MPs are calling on the Government to bring forward the MCZ programme, so that more Zones are designated in the next phase, due in 2015. Ministers should follow a precautionary principle approach to designating new Zones, according to the Committee, and use the 'best available' data rather than applying the more stringent evidence standards recently introduced by the Government - which require data that is much harder and more expensive to obtain. Intense exploitation of our oceans and seas is degrading marine biodiversity and ecosystems at an alarming rate. This report presents good practice insights for effectively managing marine protected areas (MPAs), one of the policy instruments available for the conservation and sustainable ... This book reviews the need for marine conservation, summarizes general measures for ocean and coastal conservation, and explains the rationale for establishing marine protected areas. The second half of the book is essentially a guideline for designing and implementing protected areas in order to make them viable and long-lasting in their effectiveness. This document is the result of a survey of over 600 books, articles, technical reports and personal correspondence reviewing approximately 1,000 coastal and marine protected areas in 87 countries and, in turn, was intended to

support a larger project that had been undertaken by the Marine Policy and Ocean Management Center of the Woods Hole Oceanographic Institution in conjunction with the Government of Ecuador to consider the establishment of protected status for the marine area of the Galapagos Archipelago. To provide background for this larger project, a review of existing or proposed marine protected areas was initiated. This bibliographic listing is one result of this review. Marine Protected Areas Network in the South China Sea suggests legal and political measures to support the development of a network of marine protected areas in the South China Sea. They could not only help protect the marine environment but also promote peace and cooperation between regional States. With the health of the world's oceans threatened as never before, it is becoming increasingly apparent that Marine Protected Areas (MPAs) play a vitally important role in protecting marine and coastal habitats. Management of Marine Protected Areas: A Network Perspective draws on the results of a major EU-sponsored research project related to the establishment of networks of MPAs in the Mediterranean and Black Seas that transpired from February 2011 to January 2016. Featuring contributions by leading university- and national research institute-based scientists, chapters utilize the latest research data and developments in marine conservation policy to explore issues related to ways in which networks of MPAs may amplify the effectiveness and conservation benefits of individual areas within them. Topics addressed include the broader socio-economic impacts of MPAs in the Mediterranean and Black Seas; the use of Marine Spatial Planning (MSP) to resolve conflicts between marine resource use and protection; special protection measures under the EU's Marine Strategy Framework Directive (MSFD); ecological value assessments in the Black Sea; the Ecosystem Approach (EA) for managing marine ecosystems; MPAs along Turkey's Black Sea coast; MPAs and offshore wind farms; and managing and monitoring MPA networks within and between the Black and Mediterranean Seas. Timely and important, Management of Marine Protected Areas: A Network Perspective offers invaluable insights into the role of MPAs in preserving the welfare and long-term viability of our world's oceans. 'Erich Hoyt's handbook is an admirable, timely and highly welcome contribution.' Michael Stachowitsch, Marine Ecology What does it mean to save the whales if their habitat is left unprotected? Marine Protected Areas for Whales, Dolphins and Porpoises is the definitive handbook on this pressing issue and the first to bridge the gap between the disciplines of marine protected areas and cetacean conservation. It launches a new chapter in cetacean conservation with its investigation into the crucial habitat needs and protection requirements of some 84 species. The author, one of the world's foremost experts in this field, takes you around the world to investigate the promising results of the latest conservation research and the strategies for obtaining marine protected areas in coastal waters and on the high seas, using national legislation and regional and international conventions. This is an essential introduction, guide and reference work for those working to ensure a future for whales and dolphins. "This document presents case studies of the policy, governance and institutional issues of marine protected areas (MPAs) in Brazil, India, Palau and Senegal. It is the first of four in a global series of case studies on MPAs"--Back cover.
