This is a textbook and reference for readers interested in quasilinear control (QLC). QLC is a set of methods for performance analysis and design of linear plant or nonlinear instrumentation (LPNI) systems. The approach of QLC is based on the method of stochastic linearization, which reduces the

nonlinearities of actuators and sensors to quasilinear gains. Unlike the usual - Jacobian linearization - stochastic linearization is global. Using this approximation, QLC extends most of the linear control theory techniques to LPNI systems. A bisection algorithm for solving these equations is provided. In addition, QLC includes new problems, specific for the LPNI scenario. Examples include Instrumented LQR/LQG, in which the controller is designed simultaneously with the actuator and sensor, and partial and complete performance recovery, in which the degradation of linear performance is either contained by selecting the right instrumentation or completely eliminated by the controller boosting. This comprehensive chapter-by-chapter companion to the textbook includes a wide variety of exercises to enhance learning and hold students' interest. Checklists for the textbook procedures allow for instructor or self-evaluation. Additional Learning Activities provide exercises that go beyond the textbook. New to this edition is a Competency Evaluation Review. Includes a variety of exercises to enhance learning. Checklists for the textbook procedures allow for instructor or self-evaluation. New to this edition is a Competency Evaluation Review section that will help students prepare for the certification exam. First ever full-length study of four works by Gilbert Sorrentino, the contemporary American novelist. Gilbert Sorrentino is the most innovative and experimental writer now working in America. In a long and still continuing series of novels he has broken down the barriers of fictional realism in ways which undercut the traditional boundaries between fact and fiction, exposing the problematical character of representation. However, although his position in contemporary American fiction is assured, he has not yet received the serious critical attention his work deserves. This volume is the first full length treatment of his work in depth and detail; it examines four novels published by Sorrentino in the 1980s (*Crystal Vision*, *Odd Number*, *Rose Theatre* and *Misterioso*), aiming to identify the critical and philosophical problems raised in his work and assessing his achievements in dealing with them. Designed for shorter programs of 85 hours or fewer, *Mosby's Essentials for Nursing Assistants, 5th Edition* provides coverage of the concepts and skills that are essential to becoming a nursing assistant. With focus on quality of life in the patient/person and self-pride in the nursing assistant this concise text emphasizes the importance of treating residents with respect while providing safe, competent, and efficient care. *Delegation Guidelines* identify the nursing assistant's specific responsibilities in accepting commonly delegated tasks. *Promoting Safety and Comfort* boxes highlight important considerations for providing safe and effective care while promoting patient comfort. *Procedures* boxes are divided into step-by-step format with instructions for performing each skill, including *Quality of Life* courtesies, *Pre-procedure*, *Procedure*, and *Post-Procedure* sections to make learning critical skills easier. *Focus on PRIDE* boxes highlight personal and professional responsibility, rights and respect, independence and social interaction, delegation and teamwork, and ethics and laws, encouraging you to promote pride in the person, family, and yourself. *Quality of Life* reminders in the procedure boxes reinforce the simple courtesies that should be afforded to all patients, demonstrating how to show respect for the patient as a person. *NNAAP in the Procedure Title Bar* alerts you to skills that are part of the National Nurse Aide Assessment Program.

Designed to present some of the current research on student motivation, cognition, and learning, this book serves as a festschrift for Wilbert J. McKeachie who has been a leading figure in college teaching and learning. The contributions to this volume were written by former students, colleagues and friends. A common focus on a general or social cognitive view of learning is shared throughout the volume, but there are significant differences in the perspectives the researchers bring to bear on the issues. They provide an excellent cross-section of current thinking and research on general cognitive topics such as students' knowledge structures, cognitive and self-regulated learning strategies, as well as reasoning, problem solving, and critical thinking. Social cognitive and motivational topics are also well represented, including self-worth theory and expectancy-value models. More importantly, an explicit attempt is made to link cognitive and motivational constructs theoretically and empirically. This area of research is one of the most important and promising areas of future research in educational psychology. Finally, most of the chapters address instructional implications, but several explicitly discuss instructional issues related to the improvement of college students' motivation and cognition. "Forty-three years ago the Italian parliament passed a law (law 517 of 1977) that would have boasted Italy for the role of leading country in the area of inclusion. With that choice, Italy accepted to open up to diversity, to embrace it, to work with and for it, questioning the pedagogical community on what were the best practices to face this educational and social challenge. A choice that today bears fruit, in a context where diversity is normal (Canevaro, 2007, Ianes, 2006). A choice that we must defend in the name of all children and their right to education. The present book develops within this framework and is characterized by the

desire to give voice to another nuance of diversity, often mistakenly considered as “good difference” and as such, not in need of targeted interventions: the Giftedness.” Solid state power amplifiers (SSPA) are a critical part of many microwave systems. Designing SSPAs with monolithic microwave integrated circuits (MMIC) has boosted device performance to much higher levels focused on PA modules. This cutting-edge book offers engineers practical guidance in selecting the best power amplifier module for a particular application and interfacing the selected module with other power amplifier modules in the system. It also explains how to identify and mitigate peripheral issues concerning the PA modules, SSPAs, and microwave systems. This authoritative volume presents the critical techniques and underpinnings of SSPA design, enabling professionals to optimize device and system performance. Engineers gain the knowledge they need to evaluate the optimum topologies for the design of a chain of microwave devices, including power amplifiers. Additionally, the book addresses the interface between the microwave subsystems and the primary DC power, the control and monitoring circuits, and the thermal and EMI paths. Packed with 240 illustrations and over 430 equations, this detailed book provides the practical tools engineers need for their challenging projects in the field. Dynamic author team provides comprehensive overview with focus on critical-thinking. The fifth edition continues a heavy focus on applying critical thinking framework in examining, analyzing, and evaluating psychological data. With significant rewriting and additional new topics as well as updated references on new research, Cross-Cultural Psychology keeps pace with the rapidly changing conditions of modern times. The dynamic team from two different worlds bring a unique set of experiences and perceptions in writing this book. Paolo Sorrentino, director of *Il Divo* (2008) and *The Great Beauty* (2013) and creator of the HBO series *The Young Pope* (2016), has emerged as one of the most compelling figures in twenty-first-century European film. From his earliest productions to his more recent transnational works, Sorrentino has paid homage to Italy's cinematic past while telling stories of masculine characters whose sense of self seems to be on the brink of dissolution. Together with his usual collaborators (including cinematographer Luca Bigazzi and editor Cristiano Travagliolo) and actors (chief among them Toni Servillo), Sorrentino has produced an incisive depiction of the contemporary European condition by means of an often spectacular postclassical style that nevertheless continues postwar Italian film's tradition of political commitment. This book is a critical examination of Sorrentino's work, focusing on his emergence as a preeminent transnational auteur. Russell J. A. Kilbourn offers close readings of Sorrentino's feature films and television output from *One Man Up* (2001) to *The Young Pope* (2016) and *Loro* (2018), featuring in-depth analyses of the director's exuberant and intensified film style. Addressing the crucial themes of Sorrentino's output—including a masculine subject defined by a melancholic awareness of its own imminent demise, and a critique of the conventional cinematic representation of women—Kilbourn illuminates Sorrentino's ability to suffuse postmodern elegies for the humanist worldview with a sense of social awareness and responsibility. Kilbourn also foregrounds Sorrentino's contributions to the ongoing transformations of cinematic realism and the Italian and European art cinema traditions more broadly. The first English-language study of the acclaimed director's oeuvre, *The Cinema of Paolo Sorrentino* demonstrates why he is considered one of the most dynamic figures making films today. Thousands of practitioners and students have relied on this handbook, now thoroughly revised, for authoritative information on the links between psychological and medical issues from infancy through adolescence. Sponsored by the Society of Pediatric Psychology, the volume explores psychosocial aspects of specific medical problems, as well as issues in managing developmental and behavioral concerns that are frequently seen in pediatric settings. The book describes best practices in training and service delivery and presents evidence-based approaches to intervention with children and families. All chapters have been rigorously peer reviewed by experts in the field. New to This Edition: *Chapters on rural health, the transition to adult medical care, prevention, and disorders of sex development. *Expanded coverage of epigenetics, eHealth applications, cultural and ethnic diversity, spina bifida, and epilepsy. *Many new authors; extensively revised with the latest with the latest information on clinical populations, research methods, and interventions. *Chapters on training and professional competencies, and quality improvement and cost-effectiveness, and international collaborations. See also *Clinical Practice of Pediatric Psychology*, edited by Michael C. Roberts, Brandon S. Aylward, and Yelena P. Wu, which uses rich case material to illustrate intervention techniques. Schema matching is the task of providing correspondences between concepts describing

the meaning of data in various heterogeneous, distributed data sources. Schema matching is one of the basic operations required by the process of data and schema integration, and thus has a great effect on its outcomes, whether these involve targeted content delivery, view integration, database integration, query rewriting over heterogeneous sources, duplicate data elimination, or automatic streamlining of workflow activities that involve heterogeneous data sources. Although schema matching research has been ongoing for over 25 years, more recently a realization has emerged that schema matchers are inherently uncertain. Since 2003, work on the uncertainty in schema matching has picked up, along with research on uncertainty in other areas of data management. This lecture presents various aspects of uncertainty in schema matching within a single unified framework. We introduce basic formulations of uncertainty and provide several alternative representations of schema matching uncertainty. Then, we cover two common methods that have been proposed to deal with uncertainty in schema matching, namely ensembles, and top-K matchings, and analyze them in this context. We conclude with a set of real-world applications. This doctoral dissertation concerns the legal drafting issues related to environmental taxes. What is left of the economic idea

of an environmental tax after it has been recast as a legal institution? To what extent have environmental taxes been adjusted to the existing legal system and to what extent have their specific objectives been taken into account? How are we to promote the theoretical virtues of environmental taxes in practice and how can we avoid the pitfalls implicit in a sustainable tax policy? What kind of challenges and opportunities exist to change the tax mix? To answer these questions, the concept of an environmental tax is clarified and different kinds of environmental taxes systematized, the forces driving the emergence of an environmental tax policy in Western Europe are outlined, and the relationship between environmental taxes and other legal institutions is analysed. Particular attention is paid to the regulatory problems surrounding carbon tax legislation.
