Land of Two Rivers Apr 18 2020 Land of Two Rivers

chronicles the story of one of the most fascinating and influential regions in the Indian subcontinent. The confluence of two major river systems, Ganga and Brahmaputra, created the delta of Bengal--an ancient land known as a center of trade, learning and the arts from the days of the Mahabharata and through the ancient dynasties. During the medieval era, this eventful journey saw the rise of Muslim dynasties which brought into being a unique culture, quite distinct from that of northern India. The colonial conquest in the eighteenth century opened the modern chapter of Bengal's history and transformed the social and economic structure of the region. Nitish Sengupta traces the formation of Bengali identity through the Bengal Renaissance, the growth of nationalist politics and the complex web of events that eventually led to the partition of the region in 1947, analyzing why, despite centuries of shared history and culture, the Bengalis finally divided along communal lines. The struggle of East Pakistan to free itself from West Pakistan's dominance is vividly described, documenting the economic exploitation and cultural oppression of the Bengali people. Ultimately, under the leadership of Bangabandhu Mujibur Rahman, East Pakistan became the independent nation of Bangladesh in 1971. Land of Two Rivers is a scholarly yet extremely accessible account of the development of Bengal, sketching the eventful and turbulent history of this ancient civilization, rich in scope as well as in influence.

**Evolution of Silicon Sensor Technology in Particle
Physics Apr 30 2021** In the post era of the Z and W discovery, after the observation of Jets at UA1 and UA2 at CERN, John Ellis visioned at a HEP conference at Lake Tahoe, California in 1983 "To proceed with high energy particle physics, one has to tag the flavour of the quarks!" This statement reflects the need for a highly precise tracking device, being able to resolve secondary and tertiary vertices within high-particle densities. Since the distance between the primary interaction point and the secondary vertex is proportional to the lifetime of the participating particle, it is an excellent quantity to identify particle flavour in a very fast and precise way. In colliding beam experiments this method was applied especially to tag the

presence of b quarks within particle jets. It was first introduced in the DELPHI experiment at LEP but soon followed by all collider experiments to date. The long expected t quark discovery was possible mainly with the help of the CDF silicon vertex tracker, providing the b quark information. In the beginning of the 21st century the new LHC experiments are beginning to take shape. CMS with its 206m of silicon area is perfectly suited to cope with the high luminosity environment. Even larger detectors are envisioned for the far future, like the SiLC project for the International Linear Collider. Silicon sensors matured from small 1in. single-sided devices to large 6in. double-sided, double metal detectors and to 6in. single-sided radiation hard sensors.

A Matrix Algebra Approach to Artificial Intelligence Jan 28 2021 Matrix algebra plays an important role in many core artificial intelligence (AI) areas, including machine learning, neural networks, support vector machines (SVMs) and evolutionary computation. This book offers a comprehensive and in-depth discussion of matrix algebra theory and methods for these four core areas of AI, while also approaching AI from a theoretical matrix algebra perspective. The book consists of two parts: the first discusses the fundamentals of matrix algebra in detail, while the second focuses on the applications of matrix algebra approaches in AI. Highlighting matrix algebra in graph-based learning and embedding, network embedding, convolutional neural networks and Pareto optimization theory, and discussing recent topics and advances, the book offers a valuable resource for scientists, engineers, and graduate students in various disciplines, including, but not limited to, computer

science, mathematics and engineering.
