Humans are imperfect, and problems of speaking, hearing and understanding are pervasive in ordinary interaction. This book examines the way we 'repair' and correct such problems as they arise in conversation and other forms of human interaction. The first book-length study of this

topic, it brings together a team of scholars from the fields of anthropology, communication, linguistics and sociology to explore how speakers address problems in their own talk and that of others, and how the practices of repair are interwoven with non-verbal aspects of communication such as gaze and gesture, across a variety of languages. Specific chapters highlight intersections between repair and epistemics, repair and turn construction, and repair and action formation. Aimed at researchers and students in sociolinguistics, speech communication, conversation analysis and the broader human and social sciences to which they contribute - anthropology, linguistics, psychology and sociology - this book provides a state-of-the-art review of conversational repair, while charting new directions for future study. Technical Order (TO) 1-1A-1 is one of a series of manuals prepared to assist personnel engaged in the general maintenance and repair of military aircraft. This manual covers general aircraft structural repair. This is a Joint-Service manual and some information may be directed at one branch of the service and not the other. Wherever the text of the manual refers to Air Force technical orders for supportive information, refer to the comparable Navy documents (see Table 1). The satisfactory performance of aircraft requires continuous attention to maintenance and repair to maintain aircraft structural integrity. Improper maintenance and repair techniques can pose an immediate and potential danger. The reliability of aircraft depends on the quality of the design, as well as the workmanship used in making the repairs. It is important that maintenance and repair operations be made according to the best available techniques to eliminate, or at least minimize, possible failures.
