CaShawn Thompson crafted Black Girls Are Magic as a proclamation of Black women's resilience in 2013. Less than five years later, it had been repurposed as a gateway to an attractive niche market. Branding Black Womanhood: Media Citizenship from Black Power to Black Girl Magic examines the commercial infrastructure that absorbed Thompson's mantra. While the terminology may have changed over the years, mainstream brands and mass media companies have consistently sought to acknowledge Black women's possession of a distinct magic or power when it suits their profit agendas. Beginning with the inception of the Essence brand in the late 1960s, Timeka N. Tounsel examines the individuals and institutions that have reconfigured Black women's empowerment as a business enterprise. Ultimately, these commercial gatekeepers have constructed an image economy that operates as both a sacred space for Black women and an easy hunting ground for their dollars. With the increasing worldwide trend in population migration into urban centers, we are beginning to see the emergence of the kinds of mega-cities

which were once the stuff of science fiction. It is clear to most urban planners and developers that accommodating the needs of the tens of millions of inhabitants of those megalopolises in an orderly and uninterrupted manner will require the seamless integration of and real-time monitoring and response services for public utilities and transportation systems. Part speculative look into the future of the world's urban centers, part technical blueprint, this visionary book helps lay the groundwork for the communication networks and services on which tomorrow's "smart cities" will run. Written by a uniquely well-qualified author team, this book provides detailed insights into the technical requirements for the wireless sensor and actuator networks required to make smart cities a reality. Updated for Java SE 8, this book teaches the three most important topics in Java programming: the language syntax, object-oriented programming (OOP) and Java core libraries. This book introduces important programming concepts and is a guide to building real-world applications, both desktop and web-based. The coverage is the most comprehensive one can find in a beginner's book. In *Racing Toward Zero*, the authors explore the issues inherent in developing sustainable transportation. They review the types of propulsion systems and vehicle options, discuss low-carbon fuels and alternative energy sources, and examine the role of regulation in curbing emissions. All technologies have an impact on the environment, from internal combustion engine vehicles to battery electric vehicles, fuel cell electric vehicles, and hybrids--there is no silver bullet. The battery electric vehicle may seem the obvious path to a sustainable, carbon-free transportation future, but it's not the only, nor necessarily the best, path forward. The vast majority of vehicles today use the internal combustion engine (ICE), and this is unlikely to change anytime soon. Improving the ICE and its fuels--entering a new ICE age--must be a main route on the road to zero emissions. How do we go green? The future requires a balanced approach to transportation. It's not a matter of choosing between combustion or electrification; it's combustion and electrification. As the authors say, "The future is eclectic." By harnessing the best qualities of both technologies, we will be in the best position to address our transportation future as quickly as possible. **THE CONTENTS OF TWO BOXES LEAD TO AN UNFORGETTABLE DISCOVERY** Sebastian Reynolds, a noted Canadian columnist, teams up with Colonel Jerome Woodrow, a retired Vietnam veteran with a heart of gold, to find the killer of his old military comrade on a Caribbean island. This volume explores the twenty-first century classroom as a uniquely intergenerational space of religious disaffiliation, and questions about how our work in the classroom can be, and is being, re-imagined for the new generation. The culturally hybrid identity of Millennials shapes their engagement with religious "others" on campus and in the classroom, pushing educators of comparative theology to develop new pedagogical strategies that leverage ways of seeing and interacting with their teachers and classmates. Reflecting on religious traditions such as Islam, Judaism, African Traditional Religions, Hinduism, Christianity, and agnosticism/atheism, this volume theorizes the theological outcomes of current pedagogies and the shifting contours of comparative theological discourse. **AUTOMOTIVE TECHNOLOGY: A SYSTEMS APPROACH** - the leading authority on automotive theory, service, and repair - has been thoroughly updated to provide accurate, current information on the latest technology, industry trends, and state-of-the-art tools and techniques. As the world becomes increasingly globalized, today's companies expect to hire engineers who are effective in a global business environment. Although you can find many books covering globalization, most of them are aimed at business, management, or social sciences. Developed with engineers in mind, *Global Engineering: Design, Decision Making, and Communication* covers the theory, models, and decision making tools for incorporating globalization into engineering work. Written by a multidisciplinary team of experts in industrial, mechanical, and manufacturing engineering and organizational communications, this book is a primer on how to improve designs, make better decisions, and communicate more effectively in an international working environment. The contents of the book reflect the authors' multidisciplinary perspective and their experience in working on projects around the world. The book presents globalization as a phenomenon affecting the way companies operate and their engineering functions. It uses a case study format based on system improvement projects and real industrial projects, ranging from design to supply chain and logistics problems. This case study format allows for a natural presentation of critical technical and non-technical concepts and their complex interactions. The challenge that engineers face in a global environment results from the need to be aware of interdependencies and to be able to determine which ones are most important in each situation. Unique in its focus on engineering, this book provides a framework for how to better design, make decisions, and communicate in the new era of global competition. This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations. This book is about how to develop future automotive products by applying the latest methodologies based on a systems engineering approach and by taking into account many issues facing the auto industry such as meeting government safety, emissions and fuel economy regulations, incorporating advances in new technology applications in structural materials, power trains, vehicle lighting systems, displays and telematics, and satisfying the very demanding customer. It is financially disastrous for any automotive company to create a vehicle that very few people want. To design an automotive product that will be successful in the marketplace requires carefully orchestrated teamwork of experts from many disciplines, substantial amount of resources, and application of proven techniques at the right time during the product development process. *Automotive Product Development: A Systems Engineering Implementation* is intended for company management personnel and graduate students in engineering, business management and other disciplines associated with the development of automotive and other complex products. Cyber Mercenaries explores how and why states use hackers as proxies to project power through cyberspace. The oldest of the Jamison triplets, hereditary witch and criminal defense attorney, Astra Jamison knows more about the laws of magick than her two sisters. She serves the Goddess but believes those who hurt and harm those who can't defend themselves should be punished, abhorring it when innocents suffer. She is always willing to dole out her kind of justice to anyone who offends her, often sending them to gruesome deaths. When she and her sisters open a time portal to 1888 Liberty Valley to save two people from a serial killer, the last thing she expects is to have the wizard she views as an age-old enemy return, seeking retribution for sins she committed in the past. Wizard and healer in more than one life, Rowdy Tall-Deer struggled to survive when his soul-matched mate arranged his murder time and again, having rogue shape-shifters attack and eat him alive. Discovering a time portal that leads to the 21st century and the witch who betrayed him means making new plans. Does he opt for vengeance or attempt to learn the truth behind her machinations? Nothing is as it seems when her demon father becomes involved, determined to continue a war that began eons ago. Will love finally conquer evil or is history doomed to repeat itself for their next life? To leverage the power of brand meaning or semiotics, management needs a research approach that taps into consumers' experiences, cultural perspectives, and emotional intelligence. This book presents such an approach by decoding the cultural myths, social networks and deep experiences consumers associate with marketing signs, spaces and rituals. This book features 20 SAE technical papers, originally published in 2009 and 2010, which showcase how the mobility industry is developing greener products and staying responsive - if not ahead of - new standards and legal requirements.
