Dispute boards were first introduced almost 20 years ago. Since then close to \$100 billion US dollars worldwide has been spent on construction projects that have used dispute boards. Of these, 98% were constructed without any court battles and of the remaining 2%, the dispute board decisions were upheld by either arbitration and/or the court: a truly impressive record. Yet very little is known about what dispute boards are and how they operate. This book provides the knowledge necessary for those actively involved in dispute board work as

well as for those who need to learn the process. Important features of the book include: analysis of the differences between dispute adjudication boards, dispute resolution boards and combined dispute boards in-depth discussion of both the existing and historical international case law on dispute boards, including its history under the British common law, European civil law and Muslim Shari'ah law analysis of the differences between the various major standard forms of dispute board rules - FIDIC, International Chamber of Commerce and DBFederation - along with sample wording to add to or modify these forms as needed. analysis of how referrals are made to dispute boards and sample forms. an in-depth discussion of the ethical requirements relating to dispute board members comparison of board selection techniques with guidelines for implementation and recommendations for the parties sample forms for use in establishing a dispute board discussion of site visits, how they should be conducted and sample forms general forms for use in operating a dispute board, form agendas, form reports and their use how to use a dispute board as a sounding board for grievances in depth discussion of how to write a decision or recommendation with examples of actual dispute board decisions and recommendations disclosure forms, questionnaires for potential board members, and comparison of board member agreements and sample forms a discussion of how to effectively use witnesses

and the preparation and presentation of witness statements in dispute board hearings forms of notice and procedural rules governing the operation of dispute boards international case studies with claims, responses and decisions analysis of situations requiring the removal of dispute board members and form agreements for their removal discussion of the use of dispute boards in areas other than construction. 'It is clear that there is less chance of failure to observe contract compliance using [this] book, than reliance on reading though the appropriate clauses in the contract... A big plus is that those using the book will find answers to queries relating to contractual issues arising from the FIDIC contracts conditions in a fraction of the time it would take if it were necessary to study the full text... For those using the FIDIC forms for the first time, or infrequently, this book is a must, whilst experienced users will find it a valuable memory jogger. Whichever category the reader falls into, using this book should improve performance... The book is ideal for engineers, quantity surveyors, contract managers and any person whose job it is to understand the workings of a FIDIC contract.' From the book's Foreword by Roger Knowles The most important part of any contract is the obligations of the parties, the time frames in which the parties must perform these obligations, and the consequences of failing to meet them. Failure to carry out obligations correctly is a serious risk and common source of contention or claims.

This practical ready-reference on the contractual obligations of the various parties for a FIDIC construction contract promotes efficient administration of construction projects, prevents contention and aids an easier understanding of their obligations. The FIDIC Contracts: obligations of the parties is presented in an easily-referenced format, with the obligations set out in tabular form and clear summaries for each type of contract given in separate sections for the Employer, the Contractor and the Engineer. This guide's ready-reference style will enable the project manager, quantity surveyor or contract manager to quickly check that his company is performing the required obligations correctly - and also ensure the other parties are doing the same. This guide will help the contractor's staff overcome some of the difficulties encountered on a typical international contract using FIDIC forms. The majority of FIDIC-based contracts use the Red Book (Conditions of Contract for Construction), so this book concentrates on the use of those particular forms. Supplementary comments are included in Appendix C for the Yellow Book (Plant & Design-Build) recommended for use where the contractor has a design responsibility. The Contractor is represented on site by the Contractor's Representative who carries the overall responsibility for all the Contractor's on-site activities. In order to provide guidance to the Contractor's Representative and his staff, this book is divided into five sections: A

summarized general review of the Red Book from the Contractor's perspective. A review of the activities and duties of the Contractor's Representative in the same clause sequencing as they appear in the Red Book. A summary of these activities and duties but arranged in order of their likely time sequence on site. This has the added intention of providing the Contractor's Representative with a means of ensuring that documents are not only properly provided to the Employer and Engineer, but most importantly that they are provided within the time limits specified in the Contract. A selection of model letters is provided which make reference to the various clauses of the contract requiring the Contractor to make submissions to the Employer or Engineer. Various appendices. The guide is not intended to be a review of the legal aspects of FIDIC-based contracts; legal advice should be obtained as and when necessary, particularly if the Contractor has little or no knowledge of the local law. Armed on site with a copy of The Contractor and the FIDIC Contract, the Contractor's Representative will be more able to avoid contractual problems rather than spend considerable time and energy resolving those problems once they have arisen. FIDIC Contracts: Law and Practice is sure to become the leading industry standard guide to using the FIDIC forms, and is the only book to date which deals with the whole suites of contracts, including the new gold book for Design, Build and Operate projects. The White & Case work

is outstanding in its detailed consideration and treatment of the legal aspects of the interpretation and application of the Conditions, touching on many points that most people would not have encountered. Humphrey Lloyd, International Construction Law Review [2010] ICLR 386 The 4th edition of FIDIC's book, the Conditions of Contract for Works of Civil Engineering Construction, was published in 1987 yet it has taken time for users to gain experience of the form in practice. This volume has been designed as an aid to anyone having to deal with FIDIC's conditions, featuring: the full text of Parts I and II, plain English explanation of each clause, a clause-by-clause commentary, over 90 suggested forms for use with the conditions and a comparison of the 3rd and 4th editions. This guide aims to provide assistance in drafting civil engineering contracts, considering tender documentation, drafting and considering amendments to the conditions, advising on contracts, dealing with the conditions on site, administering civil engineering contracts and resolving claims and disputes. Construction drafting is a central part of commercial property transactions, raising complex issues of law, interpretation and procedure. The key to addressing these issues lies in having rapid access to draft forms of agreement and specialist expertise based on a sound understanding of industry practice, case-law and current legislation. Manual of Construction Agreements is a complete guide to all aspects of the relevant law and practice.

Richard Cockram, one of the country's leading construction lawyers, provides detailed and authoritative commentary and a review of all standard form agreements relevant to the UK construction market. In addition there is an exhaustive suite of over 100 expertly drafted forms and precedents, together with comprehensive annotations. It is regularly updated to cover relevant developments in construction law and practice, and is fully up-to-date with the recent amendments to the Housing Grants, Construction and Regeneration Act 1996, effected by the Local Democracy, Economic Development and Construction Act 2009. The CD-ROM contains fillable Word documents of forms and precedents for use in connection with building and civil engineering contracts, particularly in cases incorporating the JCT 2011 or ICE or NEC standard forms, and the related appointment of consultants and ancillary documentation. This form is intended for small works at values at £250,000 or less (at 2011 prices) and in duration no longer than 6 months, described by drawings and/or a Specification/Schedule of Works but not using a bill of quantities. It should not be used for more complex works or when the Contractor is to design the works. This work provides a detailed hands-on guide to the drafting, negotiation and interpretation of natural gas and LNG sales and transportation contracts. Explains the critical components of the agreements which set out the terms between buyers, sellers, transporters

and shippers, leading to the sale and transportation of gas and LNG. Discusses the nature of gas and LNG (including shales and unconventional) and the contracting process. Offers clause-by-clause commentary on the typical provisions within gas and LNG sales and transportation agreements. Pinpoints the key issues and suggests solutions to problems that can arise. Identifies the legal and commercial issues involved at each stage, from quality specification and force majeure to liabilities/limitations and dispute resolution, and advises how they should be handled in the contract. Provides discussion on the commercialisation of natural gas in light of recent concerns about climate change, cleaner energy sources and the security of energy supplies. Includes expertly drafted precedents, also on a CD-ROM for rapid drafting. Written from the perspective of English law but in the light of international experience and practice. When all parties involved in the construction process fully understand their roles and are able to anticipate potential points of conflict, disputes and delays will be minimised. The Employer's and Engineer's Guide to the FIDIC Conditions of Contract sets out the essential administrative requirements of a FIDIC based contract by reference to the FIDIC 1999 Red Book. The obligations and duties of the Employer and the Engineer are identified and discussed. Potential pitfalls are highlighted and likely consequences pointed out. The importance of the Employer's role in the

preparation of tenders, which fully reflect his requirements and duties and obligations arising in the execution of the works, is emphasised. The key role of the Engineer in the effective administration of contracts after award is examined and commentary provided. Included in the guide are a number of appendices, including model letters which will be of value to less experienced staff (particularly those whose mother-tongue is not the English language). Engineers, quantity surveyors and project managers engaged in the contractual administration of international projects using FIDIC forms of contract will find the concise guidance in simple and jargon-free language provided here invaluable. This, together with the author's earlier book, Contractor's Guide to the FIDIC Conditions of Contract - which describes the duties, rights and responsibilities of the Contractor - represents the totality of supervision, design and execution of construction projects executed under the FIDIC Conditions of Contract. This book's companion website offers invaluable resources to freely download, adapt and use: Model letters for use by the Employer. Model letters for use by the Contractor. Sample Interim Payment Certificate. Model Form for Submissions to the Engineer. Model Form of Engineer's Order for Varied Works. Model Form of Daywork/Daily Record Sheets. "Aimed at a global market so not oriented to any particular legal system, the book is useful to readers throughout the world". - In this unique guide to the suite of contracts

published by FIDIC (The International Federation of Consulting Engineers) - the contract forms most widely used for international construction undertakings - twenty-two outstanding authorities in construction law from a wide variety of countries, describe relevant likely pitfalls (and special opportunities) for foreign lawyers in each of their jurisdictions. This very useful book will be extremely welcome to in-house counsel who must evaluate the legal disposition of a proposed or pending construction contract subject to the laws of a foreign jurisdiction. It will continue to be of service as long as the project proceeds and beyond, particularly for the optimal resolution of disputes. Hudson's is recognised as a source of reliable information on the interpretation and drafting of building and civil engineering contracts. This edition covers recent developments in the law on construction contracts. Providing an explanation of Internet law and regulation, this title addresses key areas of contention, such as copyright, cash transactions, product liability, advertising, defamation and data protection. It also includes coverage of the UK implementation of the E-Commerce Directive and the E-Signature Directive, and the Gambling Act 2005. This book examines the role of the geotechnical baseline report (GBR) as a means of allocating and managing subsurface risks associated with subsurface construction. Provides a clear and comprehensive guide to the 2017 FIDIC

contracts—written by a member of the FIDIC Updates Task Group FIDIC contracts are the most widely used engineering standard form contracts internationally but until 2017 the three main forms (the Red, Yellow and Silver Books) had not been amended or updated for nearly two decades, since the first editions were published in 1999. Written by a specialist lawyer who was member of the FIDIC Updates Task Group responsible for writing the new contracts, this book examines in detail the many substantial changes they have introduced. After providing an overview the contracts are examined clause by clause with the aim of showing how each compares and contrasts with the others and how the second editions compare and contrast with the first. The first chapter describes how the Red, Yellow and Silver Books evolved from earlier contract forms and the distinctive characteristics of each, before providing an overview of the updates, including new potential risks for both Employer and Contractor, and then examining, in the second chapter, key general provisions such as the new rules on notices and limitation of liability. Chapter 3 examines the enhanced role of the Engineer in the Red and Yellow Books/Employer's Representative's function in the Silver including the new procedure for determinations as well as the Employer's obligations and contract administration. The Contractor's obligations are considered in chapter 4 while chapter 5 examines his responsibility for design in the Yellow and

Silver Books. Chapters 6 to 14 deal respectively with plant, materials and workmanship and staff and labour; time-related provisions in the three contracts including extensions of time, and the Employer's right to suspend the works; testing on and after completion and the Employer's taking over of the works; defects after taking over, acceptance of the works and unfulfilled obligations; measurement (in the Red Book), the Contract Price and payment; the new variations regime and adjustments to the Price; termination and suspension; care of the works and indemnities and Exceptional Events (previously, Force Majeure). An important feature of the new contracts is their increased emphasis on clarity in the claims process and on dispute avoidance. These topics are examined in the final two chapters, 15 and 16, which deal respectively with the new claims and dispute resolution provisions of the 2017 forms. FIDIC contracts are the most widely used standard forms of contract for international engineering and construction projects Provides a clear and comprehensive guide to the 2017 FIDIC Red, Yellow and Silver Books Written by a senior specialist lawyer and member of the FIDIC 2017 Updates Task Group responsible for writing the new contracts Accessible to those with little or no familiarity with FIDIC contracts The 2017 FIDIC Contracts is an important guide for anyone engaged in international projects, including employers, contractors, engineers, lawyers, suppliers and project financiers/sponsors. 'International

Construction Contract Management with particular reference to FIDIC contracts', is a comprehensive easy to understand and practical reference book for construction professionals working on construction projects internationally. The text in this Book is a practical and reader-friendly approach for students and new professionals in the fields Civil Engineering and the Built Environment, starting at the very beginning of construction projects and making important connections between all stages of constructional projects execution. Since, management of projects is frequently problematic because they are rarely comprised of straightforward buildings or procured under standard forms of contract, therefore it is vital to find a practical solution to solve project problems. The author has attempted to clarify terms and points of law and offered guidance that can be applied in most situations, helping the reader resolve problems quickly and without outside assistance or resorting to expensive litigation proceedings. The Book consists of 19 Chapters. Chapter 1 consists of Introduction. Chapter 2 consists of Common Methods Of Procurement and Types Of Construction Contracts Chapter 3 Consists Of Major Forms Of Contracts Used In International Construction. Chapter 19 consists of Summary and Conclusion. The Book is supported by Bibliography. Nowadays, FIDIC forms of ... The Conditions of Contract prepared by FIDIC are used extensively as the standard contract of choice in international construction and civil engineering projects. Engineers working on these projects need to be aware of these contracts, but as the forms are complex it

can be difficult to draw together all the sub-clauses relating to a particular issue. The FIDIC Plant and Design-Build Forms of Contract Illustrated crystallizes the requirements of the FIDIC P&DB contract into a range of simple to follow flow charts, providing a clear and concise way to rapidly assimilate the requirements of each clause. The relationship between the various clauses in the contract, the concepts, process methods and actors involved in each sub-clause are all easily seen, and key issues around each topic (such as periods allowed, notices, etc) are all documented. In addition, related sub-clauses and/or important additional documents are linked so that the reader has a full understanding of the wider implications of each clause. The ICE Conditions continues to be the dominant form of contract for civil engineering, despite the growing importance of the New Engineering Contract. The Seventh Edition of the ICE Conditions, published in 1999, introduced a number of changes, including: incorporating some of the concepts of the Latham Report amending certain provisions of the Sixth Edition which had attracted criticism rectifying conspicuous omissions from the text of earlier editions of the contract correcting small errors and faults from the previous edition modernising certain provisions and terms Brian Eggleston, whose previous book on the ICE Conditions was described as 'likely to become the authoritative reference source for the Sixth Edition', examines the contract clause by clause from a

practical and legal viewpoint. There is extensive coverage of case law. Written by an experienced civil engineer and recognized authority on construction contracts, this book is an essential guide. The greatly anticipated final book in the New York Times bestselling Hunger Games trilogy by Suzanne Collins. In September 1999, FIDIC introduced its new Suite of Contracts, which included a "new" Red, Yellow, Silver and Green forms of contract. The "new" Red Book was intended to replace the 1992 fourth edition of the Red Book, with the ambition that its use would cease with time. This ambition has not materialised and is unlikely to do so in the future. Despite the importance of the 1999 Forms, there has been very little published on the new concepts adopted in them and how they interact with the previous forms. This important work considers these aspects together with the many developments affecting the fourth edition of the Red Book that have taken place since 1997, when the second edition of this book was published, and relates them to key contracting issues. It is written by a chartered engineer, conciliator and international arbitrator with wide experience in the use of the FIDIC Forms and in the various dispute resolution mechanisms specified in them. Important features of this book include:

- background and concepts of the various forms of contract;
- a detailed comparison of the wording of the 1999 three main forms, which although similar in nature; it nevertheless significantly differs in

certain areas where the three forms diverge due to their intended purpose;

- analysis of the rights and obligations of the parties involved in the contract and the allocation of risks concerned;
- a range of 'decision tree' charts, analysing the main features of the 1992 Red Book, including risks, indemnities and insurances, claims and counterclaims, variations, procedure for claims, programme and delay, suspension, payments and certificates, dispute resolution mechanisms, and dispute boards;
- a much enlarged discussion of the meaning of "claim" and "dispute" and the types of claim with a discussion of the Notice provision in the 1999 forms of contract for the submission of claims by a contractor and by an employer;
- the FIDIC scheme of indemnities and insurance requirements; and the methods of dispute resolution provided by the various forms of contract; and
- five new chapters in this third edition, the first four chapters deal with each of the 1999 forms and the fifth chapter is confined to the topic of Dispute Boards. The terms of the Conditions of Contract for Design - Build and Turnkey have been prepared by the Federation Internationale des Ingenieurs Conseils (FIDIC) and are recommended for general use for the purpose of the design and construction of works where tenders are invited on an international basis; with minor modifications, the Conditions are also suitable for use on domestic contracts. These Conditions of Contract are recommended for engineering and

building work of relatively small capital value. However, depending on the type of work and the circumstances, the Conditions may be suitable for contracts of considerably greater value. They are considered most likely to be suitable for fairly simple or repetitive work or work of short duration without the need for specialist sub-contracts. This form may also be suitable for contracts which include, or wholly comprise, contractor-designed civil engineering, building, mechanical and/or electrical works -- Publisher's description. This new edition builds on Brian Totterdill's legacy and will ensure that all users are brought up to date with the most recent FIDIC developments and its expansion into a more international arena. When all parties involved in the construction process fully understand their roles and are able to anticipate potential points of conflict, disputes and delays will be minimised. The Employer's and Engineer's Guide to the FIDIC Conditions of Contract sets out the essential administrative requirements of a FIDIC based contract by reference to the FIDIC 1999 Red Book. The obligations and duties of the Employer and the Engineer are identified and discussed. Potential pitfalls are highlighted and likely consequences pointed out. The importance of the Employer's role in the preparation of tenders, which fully reflect his requirements and duties and obligations arising in the execution of the works, is emphasised. The key role of the Engineer in the effective administration of contracts after

award is examined and commentary provided. Included in the guide are a number of appendices, including model letters which will be of value to less experienced staff (particularly those whose mother-tongue is not the English language). Engineers, quantity surveyors and project managers engaged in the contractual administration of international projects using FIDIC forms of contract will find the concise guidance in simple and jargon-free language provided here invaluable. This, together with the author's earlier book, Contractor's Guide to the FIDIC Conditions of Contract - which describes the duties, rights and responsibilities of the Contractor - represents the totality of supervision, design and execution of construction projects executed under the FIDIC Conditions of Contract. This book's companion website offers invaluable resources to freely download, adapt and use: Model letters for use by the Employer Model letters for use by the Contractor Sample Interim Payment Certificate Model Form for Submissions to the Engineer Model Form of Engineer's Order for Varied Works Model Form of Daywork/Daily Record Sheets This book provides comprehensive, rigorous and up-to-date coverage of key issues that have emerged in the first quarter of the 21st Century in transnational construction arbitration and alternative dispute resolution (ADR). Covering four general themes, this book discusses: the increasing internationalisation of dispute resolution in construction law; the increasing

reliance on technology in the management of construction projects and construction arbitration/ADR; the increasing prominence of collaborative contracting in construction and infrastructure projects; the increasing importance of contractual adjudication such as dispute boards in construction and infrastructure projects; the increasing prevalence of statutory adjudication mechanisms across the world; and the greater incidence of investment disputes and disputes against States and State entities over construction and infrastructure concessions and agreements. Tapping on their substantial expertise in practice and in research, the contributor team of senior practitioners and academics in the area of construction law and dispute resolution provide readers with information that balances an intellectually rigorous academic contribution against the backdrop of real concerns raised in practice. Construction Arbitration and Alternative Dispute Resolution is an invaluable resource for practitioners in the field, academics in arbitration and construction law, and post-graduate students in construction law and dispute resolution. The FIDIC Conditions of Contract for Construction and the Conditions of Contract for Plant and Design-Build (known as the 1999 Red Book and the 1999 Yellow Book) were first published in 1999 and have been used for a large number of contracts around the world. During 2005, FIDIC and the multilateral development banks cooperated to publish the

MDB Harmonised Conditions of Contract for Construction. This book is a revised and extended edition of the authors earlier guides. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art contains the contributions presented at the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. This vision was the source of inspiration for the design of the logos of both the International (ITA) and Italian (SIG) Tunnelling Association. By placing key infrastructures underground - the black circle in the logos - it will be possible to preserve and enhance the quality of the space at ground level - the green line. In order to consider and value underground space usage together with human and social needs, engineers, architects, and artists will have to learn to collaborate and develop an interdisciplinary design approach that addresses functionality, safety, aesthetics and quality of life, and adaptability to future and varied functions. The 700 contributions cover a wide range of topics, from more

traditional subjects connected to technical challenges of design and construction of underground works, with emphasis on innovation in tunneling engineering, to less conventional and archetypically Italian themes such as archaeology, architecture, and art. The book has the following main themes: Archaeology, Architecture and Art in underground construction; Environment sustainability in underground construction; Geological and geotechnical knowledge and requirements for project implementation; Ground improvement in underground constructions; Innovation in underground engineering, materials and equipment; Long and deep tunnels; Public communication and awareness; Risk management, contracts and financial aspects; Safety in underground construction; Strategic use of underground space for resilient cities; Urban tunnels. Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art is a valuable reference text for tunneling specialists, owners, engineers, architects and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.
