Results: While the majority of coders and physicians agreed that ICD-9 should be replaced, as hypothesized, there was a statistically significant difference between coder and physician responses when asked if ICD-10 should be delayed again and if U.S. should skip ICD-10 and wait to implement ICD-11. Physicians agreed

more with both statements than coders. Additionally, the majority of physicians preferred a simpler coding and documentation system than ICD-10, while coders preferred more detail and integration. Finally, both physicians and coders expected an increase in the amount of interactions between the two groups with the implementation of ICD-10. Conclusion: Physicians expressed a stronger desire to delay the implementation of ICD-10 than coders. On the other hand, further postponement of ICD-10 or waiting until ICD-11 to transition are not realistic objectives. The data provided by ICD-9 is not descriptive enough to support the evolving healthcare industry and the U.S. cannot wait for the version of ICD-11 which would adequately support billing requirements. The amount of detail in documentation is the primary concern among both physicians and coders with ICD-10. Physicians are concerned about the time the additional detail in documentation will take away from patient care, while coders are concerned that provider documentation will not provide enough detail to support justified ICD-10 codes.
